

WESTLUND 130 PICK AND PLACE

Features:

- **Compact design**
- **Easy to tool**
- **30 degree inclined track**
- **Adjustable stroke**
- **Hardened and ground cam**
- **Hardened and ground shafts**
- **Linear Ball Bearings**
- **Stand included**

The Westlund 130 Pick and Place unit incorporates tried and proven linear ball bearings and cam followers into a compact long life assembly. The unique computer-designed cam provides the controlled characteristics necessary for today's modern parts handling requirements.

The 30 degree pick-up, utilizing an angled track from a vibratory or other type of feeder, provides one of the simplest parts transfer systems available. Many parts may easily slide down the track from the feeder to the pick-up position eliminating bulky, cumbersome and expensive shuttles or inline feeding units.

Neoprene seals can be supplied on request. A hollow shaft also available for additional parts handling capabilities, such as picking of irregular or flexible parts and positive stripping.

At your request, a company representative will analyze your application and recommend the proper equipment
