

WESTLUND

PROBE ASSEMBLY 110

While designed for use exclusively on the Westlund 260 and 380 Rotating Indexing Base, the Westlund 110 Probe Assembly has shown to be an effective addition for many automated machines.

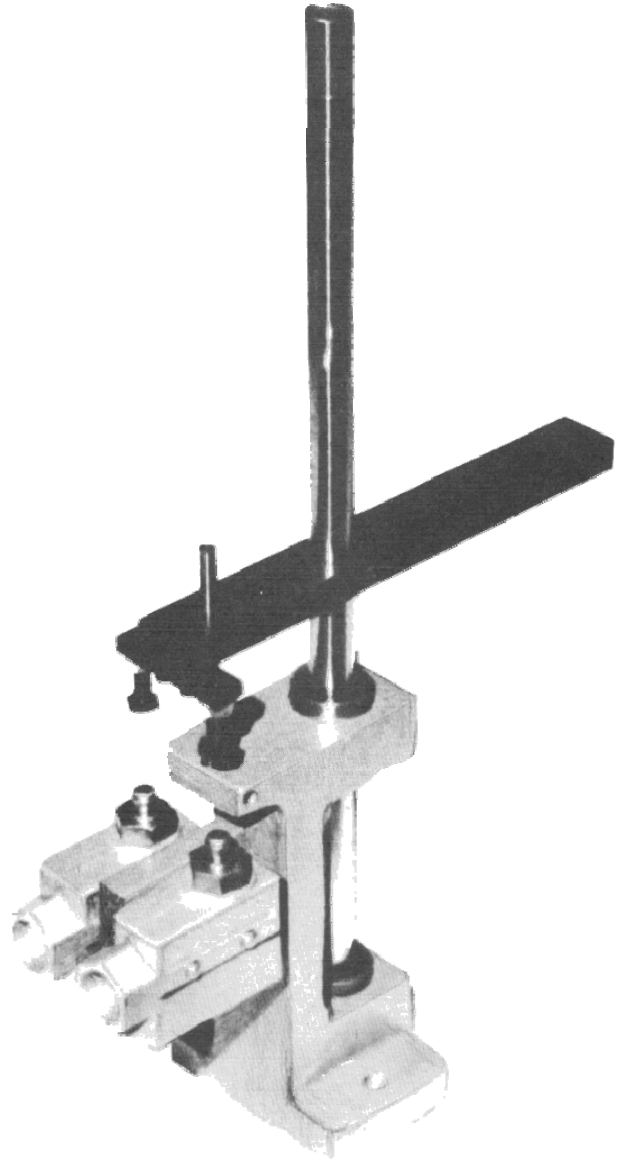

The Probe Assembly can be used for many operations such as to probe or inspect for:

- Part placement
- Part orientation
- Missing parts
- Double parts
- Dial or nest position
- Part counting
- Machine safety

The simple making or not making the furnished micro-switches in conjunction with an electronic control is all that is required for most operations.

The weight of the ground shafting riding in friction-free linear ball bearings is all that is normally needed to operate the micro-switches.

Upon your request, a representative of our company will analyze your application and recommend the proper equipment.
